

Founder of Singularity Works, a product studio shipping full-stack and DevOps work for enterprise clients. Built and deployed public platforms serving 10K+ users with sub-50ms APIs. 2x national hackathon winner and published CS researcher. Deep in TypeScript/Rust stacks, systems-level architecture, and agentic AI tooling.

TECH STACK

TypeScript, Rust, Go, C++, Python, React, Next, Express, Elysia, Tailwind, Node, Bun, PostgreSQL, MongoDB, SQLite, Redis, RabbitMQ, BullMQ, Convex, Traefik, Nginx, tRPC, AWS, GCP, Oracle OCI, Git, GitHub Actions, Jenkins, Linux, Docker, Kubernetes, Prometheus, Grafana, OpenTelemetry, OpenRouter, AI SDK.

PROJECTS

Asocialmedia (formerly Zephyr) - Social Media Aggregator & Platform — asocialmedia.cc

- Built a unified social media platform aggregating content from multiple networks, reaching 10K+ page views post-launch.
- Designed with a microservice architecture using message queues and distributed caching for scalability and fault tolerance.
- Fully self-hosted, encompassing databases, cache, object storage, CI/CD pipelines, and microservices for auth and logs behind a Traefik proxy, delivering 30x faster performance with API response times of ≈ 50 ms through streamlined request handling.
- Utilized: Next, React, Typescript, Tailwind, PostgreSQL, Prisma, Redis, RabbitMQ, tRPC, AWS, Jenkins, Docker, Traefik

Lumen - Real-Time Collaborative Workplace Platform — lumen.itssingularity.com

- Built a real-time, infinite-canvas application enabling multiple users to plan, edit, and organize work simultaneously.
- Designed a collaboration system that supports concurrent edits, live cursors, comments, and instant state synchronization across shared boards with scalable WebSocket-based infrastructure to handle high-frequency while smooth interactions and low latency.
- Integrated AI with subagents board generation, chat, permissions, and sharing to support fast setup and team workflows.
- Utilized: Next, React, Typescript, Tailwind, Zustand, Yjs (CRDTs), WebSockets, Elysia, Bun, Redis, Prisma, PostgreSQL, OpenTelemetry, Grafana, Prometheus, Docker

Chorus – AI Agent Orchestration Platform

- Built an infinite-canvas platform orchestrating AI coding agents across projects with parallel execution, Kanban workflows, approval gates, and persistent task state. Integrated 100+ AI providers, 4,000+ models, automatic port virtualization, mobile synchronization, and remote agent management.
- Advanced search including fuzzy search, tag-based filtering, multi-format export/import.
- Utilized: TypeScript, React, Next.js, Electron, OpenCode SDK, OpenRouter, OpenTelemetry, Portless, Tailscale, ngrok

EXPERIENCE

Full Stack Developer Intern | amasQIS.ai

- Built WebSocket APIs and backend for a full-stack HRMS using MERN stack and MongoDB, handling real-time CRUD operations and powering admin and super-admin dashboards. Remote (Muscat, Oman)
April 2025–December 2025
- Built RESTful APIs with FastAPI & Python to manage concurrent video streams in a multi-camera security system.

President | Mozilla Firefox Club

- Led all club operations, including strategizing and executing diverse events, managing teams, overseeing websites, CTF, hackathons and securing speakers to promote open-source principles. On-Site (Bhopal, India)
June 2025–February 2026

Infrastructure Engineer | Singularity Works - itssingularity.com

- Built selfhosted and managed infrastructure to deliver secure, scalable, and cost-efficient systems, Implemented CI/CD workflows with actions and docker compose. Remote (Bhopal, India)
August 2025–Present
- Owned full project lifecycle: architecture, development, deployment, and post-launch support.

ADDITIONAL

Open Source & Hackathons: First place Hackbyte 4.0 winner 2026, Won Wikimedia Track Hackbyte 3.0 2025 by MLH at IIITDM Jabalpur. Project Administrator for Social Winter of Code 2025 achieved top rankings (#2 in Week 1-3, #8 overall out of 450+ admins) for project mentorship. Contributed during Hacktoberfest 2024 & 2025 (40+ PR's).

Research Publication: Authored the research paper: "Fine-Tuning for Code Intelligence: Evaluating LLMs on Custom Programming Benchmarks," accepted for presentation at the CICBA 2025 Conference at Springer.

Freelance: Delivered and maintained production platforms for international clients, including enterprise systems, owning end-to-end delivery from build to deployment and ongoing support across multiple active and upcoming projects.
